

LetsTask - Wordpress Web Application Case Study

LetsTask – Wordpress Case Study

"We have been working with iFlair since 2008 and have found them to be technically very competent and very reliable. It is a pleasure working with the firm. We have no hesitation in recommending iFlair."

~ Frederick Habbe

Executive Summary

LetsTask is the **quick and easy way** to get things done by linking you with others for **secured and reliable** help in your neighbourhood. Customers can **outsource** their household work to **trusted and qualified tasker**.

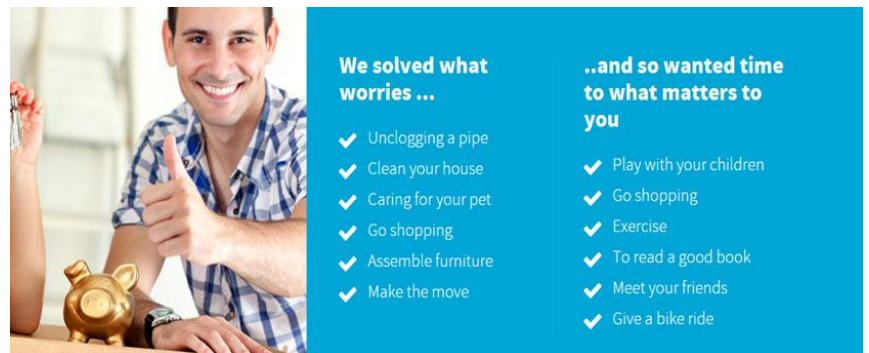

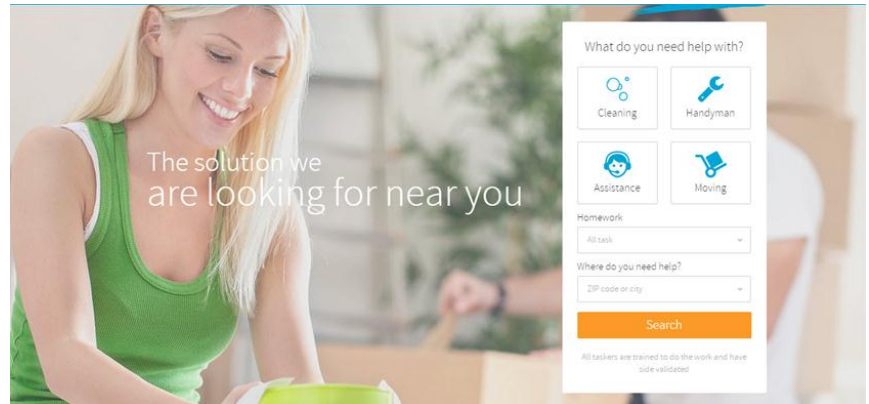

Application Features

Web Application Key Features Developed by iFlair

- LetsTask application will be used by **3 different user types**:
 - **Customer**
 - **Tasker**
 - **Administrator**

- Customer and Tasker will fix the task and price for the fixed task.
- Customer Functionality:
 - Customer **search for tasker** for the work they are looking to get accomplished.
 - If customer is interested in any tasker, they can check their profile.
 - There is **internal messaging** system available on the website to communicate between Customer and Tasker.
 - In the messaging system, Customer and Tasker are able to also **upload videos**.
 - In the messaging system we have **added restriction** to avoid showing certain data like emails and telephone numbers.
 - Customer has option to do payment via **PayPal or Credit card**.
- Tasker Functionality:
 - Tasker can create their profile along with task details.
 - There is **internal messaging system** to communicate.
 - Once tasker is hired, customer can do the payment to LetsTask and the payment will be saved with LetsTask Admin.
 - When the task is successfully completed and approved by customer then after few days Tasker can send **withdrawal request to LetsTask Admin**.
 - LetsTask will **deduct their commission** and then offline transfer the remaining amount to tasker's account.

- Customer and Tasker can provide **rating and feedback** to each other.
- LetsTask Administrator can **control and manage** the complete application.
- Search engine friendly and W3C standards compliance.
