Executive Summary

Grief Relief is a very **easy game to give you more positive thoughts and feelings**. It allows users to choose **positive images and words**. It helps them to cope with life in times of grief after the loss of a loved one, losing a job or breaking up a relationship. The app uses **cognitive bias modification**, a form of therapy used by psychotherapists.

Key Challenges

- Design and develop PhoneGap App for the grief relief app to gain positivity.

- Track reports and display in graphical representation.

Application Features

- iFlair has developed app that helps to **handle grief after the loss of a loved one to make daily life easy and convenient.**

- User selects the number of images displayed on this page that is **either 4 images or 9 images** are displayed.

- The maximum images are negative and one image is positive.

- User tries to **tap the positive image as quickly as possible.**

- **Points are awarded based on taping speed** on positive image.

- As the negative bias will decrease, the individual score are improved.

- User taps on the screen. In app we will set a reward **(an image will be displayed along with text and sound)** after certain amount of playing minutes, like after 5 minutes, 10 minutes, so on. (The rewards displayed will be **predefined in the app for each tapping count.)**

- There is functionality to track their progress. Whenever the app is used by the user their record is saved.

- User will view their Best Score, Last Score and Total Session Time.

- **Graphical representation** to track progress.

- Grief Relief App changes a **negative bias in to a positive one**, by training subconscious

mind. It really helps to make you feel better during difficult period in one's life.

Development Environment

- PhoneGap
- WordPress
- MySQL
- Responsive HTML/CSS
- Ajax, JavaScript, jQuery and JSON
